

Please do not restrict the content of programming on Satellite Radio. This is the first breath of fresh air the broadcast industry has innovated in the past decade and local broadcast giants such as Clear Channel and the other mega radio providers are choking us with commercials, bad talk radio and preprogrammed musical selections that continuously play the same tape loops of musical crap! Let Satellite Radio be! This service works everywhere I've tried to pick up the signal and gives us the commercial free programming we are willing to pay for...especially weather reports! I use XM on 2 boats that gives me current information that is vital to my safety. If the local broadcast signal extended to the Mexican Border and 20 miles offshore I'd listen to them but it doesn't work that well offshore. Finally...we've finally gotten a "for fee" alternative to the traditional broadcast media...if they want regulation...let them regulate AM and FM...they have no business in telling us what we can or cannot listen to on the XM Band!

Leave us alone!

Sincerely,

Eric Mayor
